

*\*= Patients with HIV and low CD4 counts may not tolerate full dose chemoradiation and may require omission of MMC or dose modification of radiation.*

*#= patients with T1 seen after local excision and negative margins may be observed. Those with close or involved margins need full dose chemoradiation.*

*\*\*APR may be needed in all patients with poor sphincter function causing fecal incontinence*

Table A

5FU or Cape + MMC\* and Radiation. (45-50Gy) +/- Boost for T2

Table B

Cisplatin based chemo+/-RT  
**PACLI+CARB or**  
 5 FU +Cisplatin

Table C
